

Practical Safety Management System Applications

Safety Management Systems are a powerful tool in the quest to improve aviation safety. Unfortunately, guidance on the topic often lacks practical information needed to implement an SMS in the real world. This presentation will offer the audience with tips, tricks and lessons learned in the art of SMS for both fixed and rotary wing operations, in both large and small fleets. The course will cover aspects such as: hazard identification and analysis, risk assessment, and risk control design. Specific risk information for public safety aviation will be provided in several examples.

Directions: The Holiday Inn Austen-Town Lake is just off Interstate 35 north of the Colorado River, along the frontage road. Take exit 233B-234A, Holly St. It is 8 miles northwest of the Austen-Bergstrom International Airport. When you arrive on site, check in the reception area for the ALEA seminar rooms being used that day.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.
Sign up for the FAA's safety services at www.FAASafety.gov!
